

Lubrication and Sealing Solutions for Sugar Mill Machinery

Sweeten your bottom line

REDUCE

maintenance, downtime and
repair costs and

IMPROVE

efficiency under harsh conditions

Unplanned maintenance, equipment downtime and energy waste can put as much stress on your business as the sugar cane does on your machinery.

Molykote[®] brand specialty lubricants and *Dow Corning*[®] brand silicone sealants are your trusted source for sugar mill equipment lubrication, bonding and sealing. From the mill yard conveyors to the pulp press and packaging equipment, application-matched materials from Dow Corning can help even your most challenging processes to run smoothly.

Let us help you meet tough process challenges, maximize your productivity and sweeten your bottom line with:

- Anti-seize pastes and anti-friction coatings for turbine threaded connections, equipment nuts and bolts.

- Greases for centrifuge, grinder and mill journal bearings, dryer gears and gearboxes that are suitable for use with food processing machinery.
- Specialty oils for dryers and reducers that comply with industry regulations and standards.
- Lubricants for discharge crane cables, gears, chains, metal conveyor belts, valves and o-rings.
- Heat- and solvent-resistant sealants for bonding, sealing and coating applications.

Molykote[®] brand specialty lubricants and *Dow Corning*[®] brand adhesives and sealants can comply with industry regulations while performing in extreme environments with heavy loads, high temperatures, moisture and corrosive chemicals.

These materials from Dow Corning are helping customers improve food products, packaging and manufacturing processes around the world. We can help increase performance and reduce service repairs and costs.

Dow Corning[®] brand adhesives and sealants last longer and are more versatile than most organic polymer sealants. Our one-part RTV sealants are durable, cure to a tough, rubbery solid, offer exceptional performance characteristics and meet a wide variety of your bonding, sealing and coating needs.

Our reactive hot-melt silicone technology provides instant green strength, which can increase productivity, improve quality and reduce costs. Fluorosilicone sealants offer resistance to fuels, oils or solvents — making them particularly well-suited to production of products such as ethanol.

With many years of experience and expertise in food and beverage machinery, we have the solutions you need.

Your Global Connection

Dow Corning customer service and engineering centers are strategically located worldwide. And our network of technical distributors provides local support for each and every region. We have the right lubrication and sealant solutions for today's global food and beverage industry.
